

SCHOTT CERAN® at the K/BIS 2008

Basic information

**SCHOTT
CERAN®**

Our brand

Having sold more than 80 million glass ceramic cooktop panels and ranked as the global market leader, SCHOTT CERAN® manufactures cooktops for electric, gas and induction cooking units. More than 35 years of *unmatched experience* provide us with a solid foundation of developing innovative products and design options that accommodate virtually all individual and special customer needs.

We establish *innovation partnerships* with home appliances companies, designers and retailers to develop jointly the latest innovations that match with consumers' expectations and living trends. Within these partnerships, we share our knowledge with all our partners to continue the success of a superior glass ceramic cooktop.

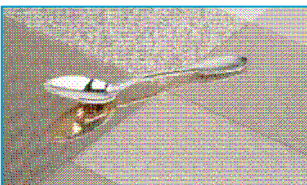

Our latest innovations

CERAN® FLASH COLORS are the latest innovation in kitchen design- taking a step away from the traditional black cooktop, SCHOTT combines light and color to create an innovative, attractive impression. CERAN® Flash Colors dazzle when they are exposed to light. Different color options perfectly match with recent trends of metallic, elegant and luxurious color shades.

CERAN SUPREMA® is SCHOTT's contribution to a sustainable and "greener" environment. This special type of ecological-friendly glass-ceramic cooktops protects the atmosphere by avoiding harmful substances used in production and meeting the future's environmental standards already today.

CERAN CLEARTRANS® revolutionizes the look of ordinary cooktop panels. It uses a mirror-like coating on glass-ceramic to enhance color and patterns to create a sleek, 3-dimensional and differentiating look for each cooktop. At its core, CERAN CLEARTRANS® offers a multitude of design possibilities because of the various colors and textures that can be applied to the top surface with various intensities.
